

Early Strength Enhancer

AAP-ES 101

Application

(AAP-ES 101) is designed to accelerate setting time along with enhancing early compressive strength. It is made of inorganic compounds to provide accelerated setting time for the cement slurry.

This additive can be used in both fresh water and salt saturated water and is designed to use in wide range of temperature but normally used in low temperature sections of a well.

The recommended dosage is %0.1 - %3(BWOC) depending on slurry's weight, well's temperature and solids to water ratio.

Physical and Chemical Properties

Item	Physical and Chemical Properties	
1	Appearance	White powder
2	Odor	None
3	Solubility in water	soluble

Safety Precautions

It is irritant. Avoid inhalation. It is recommended to wear mask and goggles during handling.

packaging

It is available in 25-kg sacks.
